

ggplot2 ecosystem & designing visualizations

Lecture 10

Dr. Colin Rundel

The wider ggplot2 ecosystem

ggthemes

ggplot2 themes

```
1 g = ggplot( palmerpenguins::penguins,  
2             aes(x=species, y=body_mass_g, fill=species)) +  
3             geom_boxplot()
```

```
1 g
```

```
1 g + theme_minimal()
```

```
1 g + theme_dark()
```

```
1 g + theme_void()
```

ggthemes

```
1 g + ggthemes::theme_economist() +
2   ggthemes::scale_fill_economist()
```

```
1 g + ggthemes::theme_gdocs() +
2   ggthemes::scale_fill_gdocs()
```

```
1 g + ggthemes::theme_fivethirtyeight() +
2   ggthemes::scale_fill_fivethirtyeight()
```

```
1 g + ggthemes::theme_wsj() +
2   ggthemes::scale_fill_wsj()
```

And for those who miss Excel

```
1 g + ggthemes::theme_excel() +  
2   ggthemes::scale_fill_excel()
```

```
1 g + ggthemes::theme_excel_new() +  
2   ggthemes::scale_fill_excel_new()
```

```

1 d = tibble(
2   car = rownames(mtcars),
3   weight = mtcars$wt,
4   mpg = mtcars$mpg
5 ) %>%
6   filter(weight > 2.75, weight < 3.45)

```

```

1 ggplot(d, aes(x=weight, y=mpg)) +
2   geom_point(color="red") +
3   geom_text(
4     aes(label = car)
5   )

```

```

1 ggplot(d, aes(x=weight, y=mpg)) +
2   geom_point(color="red") +
3   ggrepel::geom_text_repel(
4     aes(label = car)
5   )

```

```

1 ggplot(d, aes(x=weight, y=mpg)) +
2   geom_point(color="red") +
3   ggrepel::geom_text_repel(
4     aes(label = car),
5     nudge_x = .1, box.padding = 1, point.padding = 0.6,
6     arrow = arrow(length = unit(0.02, "npc")), segment.alpha = 0.25
7   )

```

ggplot objects

```
1 library(patchwork)
2
3 p1 = ggplot(palmerpenguins::penguins) +
4   geom_boxplot(aes(x = island, y = body_mass_g))
5
6 p2 = ggplot(palmerpenguins::penguins) +
7   geom_boxplot(aes(x = species, y = body_mass_g))
8
9 p3 = ggplot(palmerpenguins::penguins) +
10  geom_point(aes(x = flipper_length_mm, y = body_mass_g, color = sex))
11
12 p4 = ggplot(palmerpenguins::penguins) +
13  geom_point(aes(x = bill_length_mm, y = body_mass_g, color = sex))
```

```
1 class(p1)
```

```
[1] "gg"      "ggplot"
```

```
1 p1 + p2 + p3 + p4
```

```
1 p1 + p2 + p3 + p4 + plot_layout(nrow=1)
```

1 p1 / (p2 + p3 + p4)

```
1 p1 + p2 + p3 + p4 +
2   plot_annotation(title = "Palmer Penguins", tag_levels = c("A"))
```

Palmer Penguins

A

B

C

D

```

1 p1 + {
2   p2 + {
3     p3 + p4 + plot_layout(ncol = 1) + plot_layout(tag_level = 'new')
4   }
5 } +
6 plot_layout(ncol = 1) +
7 plot_annotation(tag_levels = c("1", "a"), tag_prefix = "Fig ")

```

Fig 3b

GGally

```
1 GGally::ggpairs(palmerpenguins::penguins)
```

```

1  airq = airquality
2  airq$Month = month.name[airq$Month]
3
4  ggplot(
5    airq,
6    aes(Day, Temp, group = Month)
7  ) +
8    geom_line() +
9    geom_segment(
10     aes(xend = 31, yend = Temp),
11     linetype = 2,
12     colour = 'grey'
13   ) +
14   geom_point(size = 2) +
15   geom_text(
16     aes(x = 31.1, label = Month),
17     hjust = 0
18   ) +
19   gganimate::transition_reveal(Day) +
20   coord_cartesian(clip = 'off') +
21   labs(
22     title = 'Temperature in New York',
23     y = 'Temperature (°F)'

```

Simpson's Paradox

Simpson's Paradox

Designing effective visualizations

Gapminder

www.youtube.com/embed/OwII-dwh-bk

Keep it simple

Judging relative area

Use color to draw attention

Tell a story

Leave out non-story details

Ordering matter

Clearly indicate missing data

Figure 4. Alternative representations of missing data in a line chart. The data are U.S. census counts of people working as 'Farm Laborers'; values from 1890 are missing due to records being burned in a fire. (a) Missing data is treated as a zero value. (b) Missing data is ignored, resulting in a line segment that interpolates the missing value. (c) Missing data is omitted from the chart. (d) Missing data is explicitly interpolated and rendered in gray.

Reduce cognitive load

Use descriptive titles

**Accuracy versus
Color and Shape**

**Accuracy Improved by
Color, not Shape**

Annotate figures

All of the data doesn't tell a story

All of the data doesn't tell a story

The Medical Economy

The middle-wage industries that have added jobs are overwhelmingly in health care. Labs, home-care providers and dentist offices all pay between \$18 and \$29 an hour on average — and all have grown. But these gains have not offset losses in other middle-wage industries, such as airlines and construction. **NEXT »**

All of the data doesn't tell a story

A Long Housing Bust

Home prices have rebounded from their crisis lows, but home building remains at historically low levels. Overall, industries connected with construction and real estate have lost 19 percent of their jobs since the recession began — hundreds of thousands more than health care has added. **NEXT »**

The Why Axis - BLS

Job openings in November 2012

JANUARY 11, 2013

There were 3.7 million job openings on the last business day of November 2012, unchanged from October 2012. In November 2011 there were 3.3 million job openings.

From November 2011 to November 2012, job openings increased most in retail trade (144,000, within the trade, transportation and utilities industry) and health care and social assistance (91,000, within the education and health services industry).

Government job openings increased the least, by 6,000.

These data are from the [Job Openings and Labor Turnover Survey](#). Data for the most recent month are preliminary and subject to revision. For additional information, see [Job Openings and Labor Turnover — November 2012](#) (HTML) (PDF), news release USDL-13-0015. More charts featuring data on job openings, hires, and employment separations can be found in [Job Openings and Labor Turnover Survey Highlights: November 2012](#) (PDF).
